Customize Your Menu with the Application Setting Tools

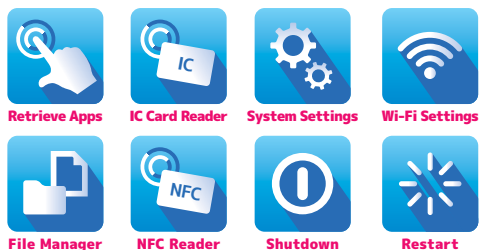

InfoSOSA Tablet Contents Manager

This is a data transferring software that lets you set the tablet menu items. You will be able to register icons to the home menu accordingly to the system you are using. Icon registration is easy; simply drag and drop.

Easy operation of simply connecting via USB to transfer the set data.

Abundant Function Settings Provided

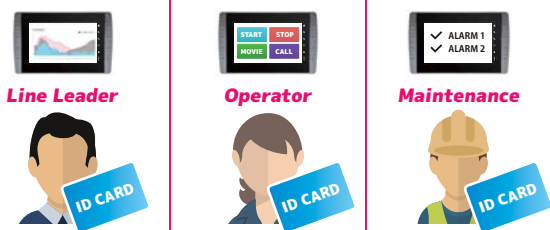

Smoothly supports your system design with abundant function setting.

Add Original Applications

Applications you are using and/or already familiar with can also be added as a menu item.

Change Applications with Cards

Applications can be changed according to the personnel by IC card authentication. There is no worry of workers using applications that aren't necessary to them.

Verify IDs with IC cards

ID Numbers can be displayed on the screen to distinguish the IC cards. Simply hold the card up to the backside of the tablet and the number can be confirmed instantly.
